## 1. Proposal One: Ayoba Bakes

Ayoba Bakes is a family-owned bakery in Polokwane, Limpopo. The business started in 2015 as a weekend home-kitchen project run by the Mokoena family. Growing demand led to the opening of its first shop on Landdros Mare Street in 2018. Its mission is to provide affordable, good-quality baked goods and bring the community together. Its vision is to become one of Limpopo's best-loved bakeries while supporting local suppliers (Mokoena, 2026).

The target audience includes Polokwane residents, commuters, families, office workers and shoppers visiting Mall of the North. The business has two locations: the City Centre store on Landdros Mare Street and a kiosk at Mall of the North in Bendor. Both operate Monday to Saturday, 06:00 to 18:00. Products include bread, vetkoek, pastries and custom cakes, with prices from R18 to R30 for selected everyday items. Custom cakes require customers to make direct enquiries (Mokoena, 2026).

### Website goals and KPIs

The website will:

- Make the bakery and its two locations easier to find online.
- Display products, prices, opening hours and contact details.
- Generate enquiries for custom cakes.
- Increase customer visits and product enquiries.

Success will be measured through monthly website visits, product-page views, enquiry form submissions, calls and direction requests. Initial targets are 300 monthly visits and 20 valid enquiries within the first three months.

### Current website analysis

Ayoba Bakes does not currently have an active website or domain. It previously relied on WhatsApp and Facebook, but these channels are being redeveloped. Customers currently lack one reliable source for the menu, prices and locations. The website will address this gap.

### Proposed features and design

The website will contain five pages: Home, About Us, Products, Enquiries and Contact. The Products page will show product descriptions and prices. The Enquiries page will include a custom-cake request form. The Contact page will show both locations, opening hours, a map and a general contact form.

The design will use warm brown, cream and soft gold to reflect a bakery. Headings will use a clear serif font and body text a readable sans-serif font. A simple layout, clear navigation and large product photographs will support mobile and desktop users.

*Low-fidelity wireframe: Header/logo and navigation → bakery banner and welcome message → popular products → custom-cake call to action → location cards → footer/contact details.*

## Technical requirements, timeline and budget

The site will use HTML5, CSS3 and JavaScript, with Visual Studio Code and GitHub for development and version control. A domain and basic hosting are estimated at R1,200 per year. Development is planned over six weeks: research and wireframe (Week 1), HTML pages (Weeks 2–3), styling and mobile layout (Week 4), forms and testing (Week 5), and final corrections and launch preparation (Week 6). Estimated first-year costs are R1,200 for domain and hosting, R500 for image preparation and R1,000 for maintenance, giving a total of R2,700. Student development has no labour charge.

## 2. Proposal Two: CloudVape Store

CloudVape Store is a proposed independent vape retail business based in Polokwane, Limpopo. It will be a physical shop serving adult customers. The business will stock vaping devices, replacement coils, accessories and e-liquids from established suppliers. Its mission is to provide factual product information and responsible service. Its vision is to become a trusted local retailer. The target audience is adults aged 18 and older. It will not target young people or present vaping as harmless.

### Website goals and KPIs

The website will help adult customers find the store, check general product categories, view opening hours and contact staff about product availability. It will also provide clear age and safety notices. KPIs will include monthly visits, age-gate completion, category views and valid adult enquiries. Targets are 250 visits and 15 enquiries in the first three months.

### Current website analysis

CloudVape Store is a new business and does not yet have a website. Customers lack a central source for store information, product categories and contact details. The website will bring this information together. It will not include online checkout, delivery sales or payment processing. Any retail activity and website content must be checked against applicable South African laws and advertising rules before launch. The Tobacco Products and Electronic Delivery Systems Control Bill was still being considered by Parliament in 2026, so the business must monitor legal changes (Parliament of South Africa, 2026a; 2026b).

### Proposed features and design

The five pages will be Home, About Us, Product Categories, Enquiries and Contact. An age-confirmation screen will restrict access to adults aged 18 and older. Product pages will provide factual descriptions without health or quitting claims. The Enquiries page will let verified adult users ask about stock, while the Contact page will include the shop address, opening hours, map and general message form. It will avoid youth-oriented images, games and language. Any nicotine warning and advertising restrictions required by applicable rules will be displayed.

The design will use charcoal, white and muted teal for a simple retail appearance. It will use readable sans-serif fonts, clear navigation and visible age and safety notices.

*Low-fidelity wireframe: Age confirmation → logo and navigation → store introduction → product category cards → responsible-use and legal notice → enquiry button → contact details and footer.*

## Technical requirements, timeline and budget

The site will use HTML5, CSS3 and JavaScript, developed in Visual Studio Code and tracked through GitHub. A domain and basic hosting are estimated at R1,200 per year. The six-week schedule will cover research and legal review (Week 1), wireframe and HTML (Weeks 2–3), CSS and responsive design (Week 4), age confirmation and enquiry form (Week 5), and testing and corrections (Week 6). Estimated first-year costs are R1,200 for domain and hosting, R500 for graphics and R1,000 for maintenance, totalling R2,700. Stock, rent and legal advice are excluded. The website will only be published after the owner confirms that its content and functions comply with current requirements.
